

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 4, lines 4-14, with the following rewritten paragraph:

In accordance with the invention, and being the ceramic cutter of the type that we have previously mentioned, the provision of at least three longitudinal rebates of any geometry in the periphery of the cutting-wheel handle which extend over substantially the entire length of the handle has been made, whose aim is to reduce the frequency of vibration during the scoring process, and, at least one coplanar or rebated longitudinal plane with respect to the general exterior surface of the handle for the actuation of the end of the lever with the job of fixing it to the machine's cutting-wheel handle holder.
